

SHREE DYNAMIC FONTS

Break The Language Barrier
Dissolve The Digital Divide

Shree Dynamic Fonts

- ▶ Shree Dynamic Fonts refer to a special category of fonts meant for Internet only. These fonts are dynamically loaded on the fly along with the Web Page in which they are embedded and hence the name Dynamic Fonts. The terms Internet Fonts and Web Fonts are aliases for Dynamic Fonts. These fonts are especially useful in the case of web pages containing Indian language contents because it is not always possible that the Indian language fonts used to develop these web pages will be installed on the client's machine.
- ▶ If the Indian language web page is using a font which is not present in the client's machine and the web page does not contain any Dynamic Fonts then the page will not be in a readable format and will show meaningless characters.
- ▶ Shree Dynamic Fonts files are browser specific. It means that these files are different for Microsoft Internet Explorer (MSIE) and Netscape. Moreover, Dynamic Fonts files are supported only by MSIE 4.0 & above and Netscape 4.03 & above.
- ▶ Currently, Dynamic Fonts are available for all Microsoft Windows platforms (Win9x/NT/2000) and Macintosh platforms on the client side. The server side can be running any Web Server on any Operating System.
- ▶ You get the following files when you place an order for Shree Dynamic Fonts.
 - 1) .pfr Files for use of fonts in the Netscape browser
 - 2) .eot Files for use of fonts in the Internet Explorer
 - 3) A Java script file containing code for selectively loading a specific file depending upon the browser.
 - 4) A Windows True Type Font File.
- ▶ The .pfr files are provided for viewing in Netscape Communicator and .eot files are used for Internet Explorer. The JavaScript file contains the logic, which loads the specific file depending upon the browser. The file is editable, and you may change it according to your needs.
- ▶ If you want the viewers of your site to have the facility of downloading the font to their machine you can do so by providing a link to the TrueType font file which you can keep in your site.

The URL of the site must be specified at the time of ordering the Shree Dynamic Fonts. The Shree Dynamic Fonts purchased by the user will work for that URL only.

License Fees for Dynamics

Particular	MRP/End User Lic. Fee in Rs.
One dynamic font of one Indian language	2,234.00

By paying Rs. 2,234.00/- you also get the license for hosting the true type font in your site. The viewers of your site can download the fonts to their machine.

Pre-Requisites

- The contents of the web page must have been developed using Shree-lipi Fonts. For optimal performance Use Shree-lipi 4.0 or above for web site content creation.
- The URL in which the Shree Dynamic Fonts will be used must be specified along with the Purchase Order.

Note

- If you have contents already developed using Shree-lipi versions 3.0 or below, then conversion programs are available from Modular InfoTech for converting them to the proper format.
- The Shree Dynamic Fonts will work only for the URL specified along with the order of Modular InfoTech's Indian language Shree Dynamic Fonts. In fact, as a measure of security this URL is embedded in the Modular InfoTech's Indian language Dynamic Font itself.
- The license fee of Shree-Lipi 5.0 starts from Rs. 4,746/- for single user version, which is the Pearl version. You can use Shree-Lipi 5.0 in co-ordination with any of the word-processing packages or content development software to develop Indian language documents and web pages.
